accessibility and frequent opportunities for application and reinforcement.

This is the first book to present comprehensive strategies and techniques that enable organizations to take charge of their Enterprise Resource Planning projects to drive success. The author describes how to become less dependent on outside consultants, significantly reduce implementation and support costs, mitigate project risks, and design business solutions that work for your company. This book also contains hundreds of tips to create internal project ownership, select ERP software, manage service providers, transfer software knowledge, develop the right implementation strategies, establish a realistic schedule and budget, and streamline business processes. It is a guide to making informed decisions during each project phase. The information is applicable to new implementations and system upgrades. Reviews "You owe it to your company and yourself to read this book. If you do so, you will sharply increase your odds for success and spend a lot less money. Steve has done the ERP industry a big service." - Thomas F. Wallace, early ERP pioneer, author, and Distinguished Fellow at The Ohio State University Center for Operational Excellence. "There really aren't many "must-read" ERP books in the 30 year (or so) history of ERP, but you can add this book to the must-read list. The book fits nicely into what I call the Center of Excellence movement - the push by ERP customers to gain more value out of their ERP investments and endure less headaches." - Jon Reed, SAP/ERP Market Analyst. "I love this book." - R. Ray Wang. CEO and Principal Analyst at Constellation Research and a founding partner of the Altimeter Group. "If the Project Management Institute (PMI) had a certification program in ERP Management, this would be the only textbook needed." - Andy Klee, President, Klee Associates, ERPtips.com (SAP), and JDEtips.com (JD Edwards).

Annotation Written by two well-known industry experts, this book shows the reader how to design Terminal Server solutions with Microsoft Windows Server 2003. Rather than a re-hash of the product manuals, this book takes you step-by-step through each aspect of the design process. It focuses on architecture, server type and location, printing, security, management, application deployment, and user profiles. Whether you're using Citrix MetaFrame XP or just building a pure Terminal Server environment, this is the book you need to be successful.

Business Intelligence (BI) is a broad term that relates to applications that analyze data to understand and act on the key metrics that drive profitability in an enterprise. Key to analyzing that data is providing fast, easy access to it while delivering it in formats or tools that best fit the needs of the user. At the core of any BI solution are user query and reporting tools that provide intuitive access to data supporting a spectrum of users from executives to "power users," from spreadsheet aficionados to the external Internet consumer. IBM® DB2® Web Query for i offers a set of modernized tools for a more robust, extensible, and productive reporting solution than the popular IBM Query for System i® tool (also known as IBM Query/400). IBM DB2 Web Query for i preserves investments in the reports that are developed with Query/400 by offering a choice of importing definitions into the new technology or continuing to run existing Query/400 reports as is. But, it also offers significant productivity and performance enhancements by leveraging the latest in DB2 for i query optimization technology. The DB2 Web Query for i product is a web-based query and report writing product that offers enhanced capabilities over the IBM Query for iSeries product (also commonly known as Query/400). IBM DB2 Web Query for i includes Query for iSeries technology to assist customers in their transition to DB2 Web Query. It offers a more modernized, Java based solution for a more robust, extensible, and productive reporting solution. DB2 Web Query provides the ability to query or build reports against data that is stored in DB2 for i (or Microsoft SQL Server) databases through browser-based user interface technologies: Build reports with ease through the web-based, ribbon-like InfoAssist tool that leverages a common look and feel that can extend the number of personnel that can generate their own reports. Simplify the management of reports by significantly reducing the number of report

definitions that are required through the use of parameter driven reports. Deliver data to users in many different formats, including directly into spreadsheets, or in boardroom-quality PDF format, or viewed from the browser in HTML. Leverage advanced reporting functions, such as matrix reporting, ranking, color coding, drill-down, and font customization to enhance the visualization of DB2 data. DB2 Web Query offers features to import Query/400 definitions and enhance their look and functions. By using it, you can add OLAP-like slicing and dicing to the reports or view reports in disconnected mode for users on the go. This IBM Redbooks® publication provides a broad understanding of what can be done with the DB2 Web Query product. This publication is a companion of DB2 Web Query Tutorials, SG24-8378, which has a group of self-explanatory tutorials to help you get up to speed quickly.
