This book exposes the attempt to teach atheistic evolution to students, often ridiculing their faith in God. The classrooms in our schools have become the battlegrounds for the minds of our children. Since the introduction of evolution by Charles Darwin there has been a growing list of atheist professors who vigorously fight any religion. The classrooms of America should not be the battlegrounds of any religion, but evolution is a religion. It has no place in the classroom since it does not offer any information that improves the teaching of any science class, except evolution itself. There is no proof of evolution, only assertions, innuendos, credulity (belief without proof), and suppositions. Fully one-third of all geology textbooks deal with evolution, which is founded only opinion and undocumented assertions. Therefore, it should be removed from all textbooks. Dr. David Menton, who taught medicine at the Washington School of Medicine in St. Louis, Missouri, for twenty-five years, stated that he never once needed to reference evolution in any medical class. A coalition of organizations such as the National Academy of Sciences, whose members are 93% atheist or agnostic, and the National Center for Science and Education control most of the government grants intended for schools' use, fully support the atheism of evolution, and they attack any criticism of evolution.

In a book that is both groundbreaking and accessible, Daniel C. Dennett, whom Chet Raymo of The Boston Globe calls "one of the most provocative thinkers on the planet," focuses his unerringly logical mind on the theory of natural selection, showing how Darwin's great idea transforms and illuminates our traditional view of humanity's place in the universe. Dennett vividly describes the theory itself and then extends Darwin's vision with impeccable arguments to their often surprising conclusions, challenging the views of some of the most famous scientists of our day.

Today's youth will face global environmental changes, as well as complex personal and social challenges. To address these issues this collection of essays provides vital insights on how science education can be designed to better engage students and help them solve important problems in the world around them. *Assessing Schools for Generation R (Responsibility)* includes theories, research, and practices for envisioning how science and environmental education can promote personal, social, and civic responsibility. It brings together inspiring stories, creative practices, and theoretical work to make the case that science education can be reformed so that students learn to meaningfully apply the concepts they learn in science classes across America and grow into civically engaged citizens. The book calls for a curriculum that equips students with the knowledge, skills, attitudes and values to confront the complex and often ill-defined socioscientific issues of daily life. The authors are all experienced educators and top experts in the fields of science and environmental education, ecology, experiential education, educational philosophy, policy and history. They examine what has to happen in the domains of teacher preparation and public education to effect a transition of the youth of America. This exciting, informative, sophisticated and sometimes provocative book will stimulate much debate about the future direction of science education in America, and the rest of the world. It is ideal reading for all school superintendents, deans, faculty, and policymakers looking for a way to implement a curriculum that helps build students into responsible and engaged citizens.

Times bestselling author of *Eat Pray Love*, *Big Magic*, and *City of Girls* In *The Signature of All Things*, Elizabeth Gilbert returns to fiction, inserting her inimitable voice into an enthralling story of love, adventure and discovery. Spanning much of the eighteenth and nineteenth centuries, the novel follows the fortunes of the extraordinary Whittaker family as led by the enterprising Henry Whittaker—a poor-born Englishman who makes a great fortune in the South American quinine trade, eventually becoming the richest man in Philadelphia. Born in 1800, Henry’s brilliant daughter, Alma (who inherits both her father’s money and his mind), ultimately becomes a botanist of considerable gifts herself. As Alma’s research takes her deeper into the mysteries of evolution, she falls in love with a man named Ambrose Pike who makes incomparable paintings of orchids and who draws her in the exact opposite direction—into the realm of the spiritual, the divine, and the magical. Alma is a clear-minded scientist; Ambrose a utopian artist—but what unites this unlikely couple is a desperate need to understand the workings of this world and the mechanisms behind all life. Exquisitely researched and told at a galloping pace, *The Signature of All Things* soars across the globe—from London to Peru to Philadelphia to Tahiti to Amsterdam, and beyond. Along the way, the story is peopled with unforgettable characters: missionaries, abolitionists, adventurers, astronomers, sea captains, geniuses, and the quite mad. But most memorable of all, it is the story of Alma Whittaker, who—born in the Age of Enlightenment, but living well into the Industrial Revolution—bears witness to that extraordinary moment in human history when all the old assumptions about science, religion, commerce, and class were exploding into dangerous new ideas. Written in the bold, questing spirit of that singular time, Gilbert’s wise, deep, and spellbinding tale is certain to capture the hearts and minds of readers.

Charles Darwin has become one of the most important men in history. The quiet, unsure polymath who avoided confrontation, ensconced in his family home at Down House in Kent, was also a revolutionary who developed his idea of Natural Selection in isolation. Cyril Aydon's short biography is considered one of the best introductions to the life and ideas of Darwin. With Darwin's legacy still in contention and the forthcoming anniversary of the publication of *The Origins Species*, Aydon's book is a perfect guide to the ideas as well as the man who was recently voted one of the greatest Britons of all time, and certainly one of the most influential thinkers ever.

Two evolutionists debate the intellectual roots of Darwin’s theories, drawing connections to German Romanticism, the Scottish Enlightenment, and more. Charles Darwin is an icon of modern science, and his theory of evolution is commonly referenced by scientists and nonscientists alike. Yet there is a surprising amount we don’t know about the father of modern evolutionary thinking, his intellectual roots, or even the science he produced. Debating Darwin brings together two leading Darwin scholars—Robert J. Richards and Michael Ruse—to engage in a spirited and insightful dialogue, offering their interpretations of Darwin and their critiques of each other’s thinking. Examining key disagreements about Darwin that continue to confound even committed Darwinists, Richards and Ruse offer divergent views on the man and his ideas. Ruse argues that Darwin was quintessentially British, part of an intellectual lineage tracing back to the Industrial Revolution and thinkers such as Adam Smith and Thomas Robert Malthus. Ruse sees Darwin’s work in biology as an extension of their theories. In contrast, Richards presents Darwin as more cosmopolitan, influenced as much by French and German thinkers. Above all, argues Richards, it was Alexander von Humboldt who gave Darwin the conceptual tools he needed to formulate his evolutionary hypotheses. Together, the authors show how these contrasting views on Darwin’s influences can be felt in theories about the nature of natural selection, the role of metaphor in science, and the place of God in Darwin’s thought. The book concludes with a jointly authored chapter that brings this debate into the present, focusing on human evolution, consciousness, religion, and morality.
